

## BBQ Trailer information

BBQNZ have been fabricating bbq related products for the past 11 years and started building bbq-trailers 5 years ago.

If you are looking for authentic and custom and purpose made **Stainless Steel** products, then BBQNZ is here to serve.

I use **304 Grade Stainless steel** box sections to make a framework first. This gets covered by 304 Grade stainless sheet metal of 1.5mm thick and welded onto the framework, resulting in an extraordinarily strong unit and will not break apart and it is watertight because there are no seams that must be glued together.

High quality springs, hubs, Jockey wheel and axle are the only items not stainless, but they have been hot dip galvanised.

All doors are lockable and held open with 550N - 750N gas struts.

The trailer tow exceptionally well even on long hauls.

Every trailer is issued with a 1-year Rego and a 3 year WOF

These two photos show the whole trailer package with all features included

See further information for breakdown of features and extra costs.

**The barbeques are top quality and made of 304 Grade stainless steel.** The two bbqs sits on a shelf that slides out 300mm to hang over the left side of the trailer. They are loose units and portable in other words the gas lines are not fixed to the body of the trailer at all

Underneath and part of the bbq shelf is a prep surface of 2000mm x 300mm

### **Storage unit above barbeques**

Unit is 2200mm long, 400mm deep and 300mm high. Has two sliding doors and a separation in centre.

### **Storage space underneath barbeques**

This area is 2200mm long, 850mm wide and 330mm deep

Enough space for quite a few crates and gazebos. There is a door cut into the front left side of the trailer as well as a door from the back. Easy access to everything in this storage area.

**Back of trailer** serving prep space that folds down. Size is 900mm x850mm

**Storage rack PVC Tables**

This is above the cooler bins on the left side of the trailer and can house 2x folding tables

## Cooler bins and gas bottle area

All lids closed

Gas bottle storage with lids open

Gas lids on, cooler bins lids open

9Kg LPG Gas bottles are in safe good, ventilated compartments with lids.

**Cooler bins are 120Liters** each in volume. They are built with double walled stainless sheet metal and insulated with 50mm thick polystyrene in between. The lids are also insulated, but with 25mm thick polystyrene. Each one has a drain hole with tap for easy cleaning

### **Fold down tabletop next to cooler bins**

A fold down serving bench top / tabletop is part of the prep area around the cooler bins

### **Front nose cone storage area**

Previously used as the gas bottle storage area. Now it will house the 12V battery and the charger for the LED lighting in the trailer. There is a lot of storage space left in this area for anything else

**5x 18W LED spotlights, battery and charger.**

## **BBQ Trailer BBQNZ Price Breakdown**
